

B42 LOWC APPLICATION GUIDE

Anti-icing:

- Apply before snowfall or freezing rain
- Rate: 0.5 gallons/1000ft² (25 g/m²)

Deicing:

- Rate: 1 gallon/1000ft² (50 g/m²) near 32°F (0°C) on thin ice
- Rate: 3 gallon/1000ft² (150 g/m²) near below 10°F (-12°C) on thick ice
- Re-apply when new accumulation shows first tendency to bond
- Plow and broom often to reduce fluid dilution

Storage: No agitation required; stable in long-term storage.

Spraying equipment: Use standard liquid sprayers; ensure compatibility with potassium acetate

Equipment Compatibility: Use polyethylene, stainless steel, or lacquer-lined containers. Avoid galvanized materials.

Plowing & Brooming: Regular mechanical removal reduces dilution and enhances chemical effectiveness.
